

On behalf of the management staff at Putnam Precision Molding I would like to thank the ESCO Energy Services Company for the fantastic job they have done throughout the entire process of retrofitting our factory with high efficiency fluorescent lighting.

The staff at ESCO walked us through the entire process from start to finish, completely explaining each step in detail so there was no surprises, hidden costs or untimely disruptions in our manufacturing operations.

Their crew complied with all our internal safety policies and OSHA best practices. They conducted them selves in a professional manner and literally became unnoticed after the second day.

The dramatic improvement was not only visual but proven to meet and in some cases exceed the original energy savings that were proposed for our facility. We had tossed this retrofit project around for years but after having it done, the only thing we can say is, why did we wait so long.

Sincerely,

A handwritten signature in cursive script that reads "Tim Livernoche".
